הנושא:

Application of Next Generation Sequencing (NGS) on life science research

המפגש יתקיים

ביום א', 1 יוני 2014, בשעה 9:00

מועדון סגל

Abstract:

With the development of NGS, it is more and more comprehensively applied on life science research. On DNA level, *Denovo* genome sequencing provides a powerful tool for the following research; Whole genome resequencing, target region sequencing and exome sequencing allow us to track the relatively static evidence on the difference among individuals. The application of RNA sequencing, such as transcriptome sequencing, small RNA sequencing, etc., shows us the difference not only between individuals, but also among different time or spaces. Based on multiple platforms, rich experience and well-organized team, BGI TECH is providing whole range of NGS service. All of the scientists or students who are using or interested in NGS are welcome.

סגל וסטודנטים מוזמנים להשתתף
